About Me

C++ software engineer with 4 years building desktop dental CAD applications at Atomica.ai. Led the general-cad team and built internal tooling (SQLite code generation, library editor, launcher). Strong Qt/QML skills, with side interests in emulation, network protocols, and flight simulation.

Education

Cairo University, Faculty of Engineering | Egypt
B.S. in Computer Engineering

Sep 2015 - Jul 2021

Tools

- C++, C, Go, Python, Java, Rust
- Qt/QML, React, Spring, Android
- SQLite, Docker, Linux

Experience

C++ Software Engineer

Jun 2021 - Mar 2022, Jun 2023 - Now

Atomica.ai (360Imaging) - Giza, Egypt

- Led the general-cad dental application team, made releases and scheduled new features
- Maintained the frontend of dental implant planning and teeth segmentation applications, handling cross-team feature integration and bug fixes
- Built an ImGui/SQLite Library Editor enabling product managers to update dental catalog data (implants, abutments, materials) and release to AWS — eliminating app releases for data changes
- Created a SQLite-to-C++ code generator (ldb2cpp) producing type-safe database bindings, cutting boilerplate across multiple internal projects
- Contributed to the company's core C++ libraries (mn utility library, ndcore SDK) used across all product applications
- Developed an experimental Qt/QML launcher using libgit for file synchronization and a custom version-tracking file format — some components were later adopted by the main product suite

Software Engineering Intern · Cert

Jul - Sep 2020

Solectra - El Gouna, Egypt

- Maintained an **embedded system** that collects and analyses data from electric vehicles to report trips, total revenue, and energy
- Fixed embedded system bugs and improved EV trip/revenue prediction accuracy through data analysis and additional test coverage

Projects

360Launcher

Jan - Mar 2022

Qt/QML/C++ app to install/update/launch main products and integrate with them

Library Editor

Sep - Dec 2021

C++ (+ImGui) internal tool to modify/upload versioned metadata and information. Helps product managers update domain-specific logic without new app release.

DPSX-Sync

Jun - Aug 2021

- Qt/QML/C++ experimental Dropbox-like app to add sync and collaboration features
- Uses libgit and Gitea server for versioning and synchronization

C4IAN (Graduation Project) · Repo

Feb - Jul 2021

- Tactical Mobile ad-hoc network. Supports video/audio streaming and messaging
- ZHLS+ZID unicast, ODMRP multicast, and geo-based broadcast
- **Golang** router that integrates with the Linux network stack

OpenYSF · Repo	Nov 2021 - Present
A ysflight flight simulator clone, to explore game engine architectures. Backward compatible with ysflight assets.	
Apex · Backend · Frontend · Android · Testing	Jan - Mar 2019
• Reddit clone, for web and android. Took role of Devops in team of 18 • Used Travis-CI for CI/CD, GoogleCloud, Docker, DockerCompose, and Datadog for monitoring	
NesEmu · Repo	2019 - Present
NES console emulator in C++. Hobby project.	
Koos · Repo · Rust Rewrite	Jun 2019
• Decentralized social media app, built on Fluence. AssemblyScript/Rust for server, React for frontend • Won a Bitcoin bounty for the best app that uses Fluence's technology	
Match Reservation System · Repo	Jan - Feb 2021
Web application for Egyptian Premier League for seats reservation. Used MongoDB , Nodejs and React	
Mini-Search-Engine · Repo	Feb - Mar 2020
Text and image search with trends detection. Used Java Spring and React	
Cartoonization · Repo	Oct - Dec 2019
• Snapchat Clone written in Python draws stickers on live recordings of faces • Implemented GUI, rendering stickers, and HOG algorithm • Used Viola-jones/Hog to detect faces, and multiple image processing techniques to filter the input	
RetroSoccer · Repo	Jan - Mar 2019
Multiplayer soccer game entirely in x86 IA32 MASM assembly with chat (serial communication)	
Simple PDP--11 · Repo	Oct - Dec 2019
• Design and simulation of a CPU architecture similar to <i>PDP--11</i> in VHDL and Vunit for test benches • Designed and implemented automated tests for the CPU	
TheMistake · Repo	Jan - Mar 2019
• Maze solver car using flood fill algorithm on TIVA-C μC/Arduino-Uno with ultrasonic and IR sensors • Implemented maze-solving and tested it
